SOLVE S19 collection S bags, Romania and Denmark

SOLVE S19 collection S bags, Romania and Denmark

Denmark – **Solve**, a sustainable fashion brand, has launched a downloadable collection of handbags that consumers can create with pre-owned materials.

The S Bags collection is designed for anyone that has access to a laser cutter, such as those found at Fablab or Makerspace. Laser-cutting costs around £9 (\$11, €10) and assembly times range from 10 to 20 minutes, making it a quick and affordable method of production. The digital-first collection includes the Curved S-bag, the Circular S-bag and the Block S-bag. Patterns for each design can be downloaded and made from a range of fabrics, such as cork leather and recycled polyester felt, which are both recommended by the brand.

According to Solve, the downloadable concept blends technology and design to provide consumers with access to quality fashion items, while promoting sustainable practices. Brands are beginning to explore digitising the process of making clothes and accessories. For more, subscribers can read how digital studios like **Atacac** are driving **fashion's open-source future**.
