London – **Uber** is relaunching its London app to include public transport information for the city.

As part of the ride-sharing company's wider efforts to become a one-stop transport hub, the update will include schedules and directions, as well as time and cost comparisons, for both ride-hail options and London's public transport network. When users search a destination on the app, they will now receive the fastest public transit routes and walking directions across Greater London.

London is the second city to receive the feature, following Uber's introduction of in-app public transportation pricing, schedules and directions in Denver, Colorado. 'This is central to Uber's efforts to reduce private car ownership, clean up London's air and make the city a healthier place to live,' the company said in a press release.
